BONAFIDE CERTIFICATE

Certified that this project report **"SMART FASHION RECOMMEDER APPLICATION"** is the Bonafide work of:
Nevethitha M (312419106092),
Preethi R (312419106098),
Reshma B (312419106105) and
Roshinee V (312419106107),
who carried out the project work under my supervision.

ABSTRACT

Fashion is perceived as a meaningful way of self-expressing that people use for different purposes. It seems to be an integral part of every person in modern societies, from everyday life to exceptional events and occasions. Fashionable products are highly demanded, and consequently, fashion is perceived as a desirable and profitable industry. Although this massive demand for fashion products provides an excellent opportunity for companies to invest in fashion-related sectors, it also faces different challenges in answering their customer needs.

In recent years, the textile and fashion industries have witnessed an enormous amount of growth in fast fashion. On e-commerce platforms, where numerous choices are available, an efficient recommendation system is required to sort, order, and efficiently convey relevant product content or information to users. Smart Fashion Recommender Application has attracted a huge amount of attention from fast fashion retailers as they provide a personalized shopping experience to consumers. Smart Fashion Recommender Application has been introduced to address these needs.

TABLE OF CONTENTS

1. INTRODUCTION

1.1 PROJECT OVERVIEW

The Fashion industry is one of the larger industries around the world. One of the things that have remained constant throughout human civilization is humans covering their bodies with a piece of cloth. Initially, this cloth was worn as protection from the harsh climates of those ages. Later on, as we humans learned to fend for ourselves from the unforgiving climates, the cloth started to serve a different purpose. Fashion these days showcases the individuality of the person. There are many things that can be said about a person based on their fashion sense.

1.2 PURPOSE

There is currently no existing system that is capable of recommending clothes based on the occasion. Different occasions call for different clothing. Moreover, a lot of fashion is basedon the color combinations of outfits. A person with no or little fashion sense will have a hard time to decide on clothes that leave a lasting impression. The proposed Fashion Recommendation System is intended to be used by individual users in order to store images of the clothes that they own in what is called a digital wardrobe and also to get recommendations by the system on what

clothes to wear for a given occasion. The main aim of the project is to recommend the most appropriate clothes for a given occasion based on the clothes existing in the user's wardrobe to relieve the user of the burden of making decisions about what clothing to wear. Such a system should be capable of helping someone who has no fashion sense to wear clothes that leave a good impression on others. The system should be such that it is easily accessible and easy to take advantage of the various features that it provides. One of the features should be the ability to store images that the user uploads into a wardrobe. A wardrobe is a very useful entity that the user can use to view and manage the images of clothes that they have uploaded. This feature can also be used by the recommendation algorithm to recommend the clothes. Another feature is the classification of the type and color of the clothing that is uploaded by the user. The system should be capable of handling the 4 basic clothing types: Shirt, T-Shirt, Pants and Shoes.

2. LITERATURE SURVEY

Chatbot design, consumer trust and privacy: Chung, Ko, Joung, & Kim stated that since consumers might see chatbots with negative eyes if there are privacy concerns, consumer trust is another factor that can be explored further. Aspects such as transparent advice and problem-solving could be investigated in future research, addressing the role that design plays in this context and if other factors (e.g. social elements, cultural values, self- identity) influence consumer's trust on chatbots.

Multi-user chatting: Merrilees and Miller observed that traditional shopping with a companion influences the consumer experience. Alone consumers tend to be more price sensitive. Future studies may explore the way fashion consumers seek for advice from chatbots that could be experimented with by adjusting social factors (e.g. including a friend in the conversation), evaluating the impact of these factors on user acceptance levels.

Design bots: Colombi, Kim, & Wyatt suggested that fashion chatbots may be made to behave as a fashion designer, providing a platform to support co-creation of value. Conversational platforms can provide insights for brands to recognize consumer value, which means that future research in this area can also enhance the consumer experience.

Consumer autonomy and identity in chatbot consumer experience: Ameen, Hosany, & Tarhini suggested that consumer autonomy is related to the perceived sense of control that consumers have over the interaction with chatbots and it can be attached to motivational factors. Future studies might address the role that consumer autonomy and identity play in consumer trust and acceptance, for example, by measuring chatbots design approaches that can trigger these states.

2.1 EXISTING PROBLEM:

In existing system only simple web application and their rating has been implemented in existing system, An ecommerce product recommendation engine is a piece of technology that displays recommended products to shoppers throughout your store. It uses machine learning to get smarter and show increasingly relevant products to shoppers based on their interests and previous browsing behavior.

2.2 PROBLEM STATEMENT DEFINITION

The personal information collected by recommenders raises the risk of

unwanted exposure of that information. Also, malicious users can bias or

sabotage the recommendations that are provided to other users. In recent years,

the textile and fashion industries have witnessed an enormous amount of

growth in fast fashion. On e-commerce platforms, where numerous choices are

available, an efficient recommendation system is required to sort, order, and

efficiently convey relevant product content or information to users.

> ➢ The problem of the work is to design static web applications deployments with customer deployment
> ➢ Lack of interaction between application and user
> ➢ User need to navigate across multiple pages to choose right product
> ➢ Confusion in choosing product
> ➢ Lack of sales
> ➢ Complex User Interface.

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Write down any ideas that come to mind
that address your problem statement.

🕐 10 minutes

Preethi (TL)

User friendly interface	Chatbot Implementation
Recommendation based on previously purchased products	Secure Payment

Nevethitha

Search bar	Filter by cost, clothing brand, popularity
Constant updates on offers	Prioritize Customer Preference

Reshma

Smart mixing and matching clothes and accessories	Low data consumption
Secure user authentication	Product recommendation based on user ratings

Roshinee

Simple user navigation	Seamless user experience
High resolution images of products	Image based searching

Step-3: Idea Prioritization

Importance

If each of these tasks could get done without any difficulty or cost, which would have the most positive impact?

Sticky notes on grid:

- Integrated chatbot
- Simple user experience
- Securing user information
- Secure payment
- Recommendation based on cost, brands, offers, size, user ratings
- Updates on offers and discounts
- Smart mixing and matching of clothes
- Camera for image based search

TIP

Participants can use their cursors to point at where sticky notes should go on the grid. The facilitator can confirm the spot by using the laser pointer holding the H key on the keyboard.

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Empathy Map:

LITERATURE SURVEY

S.NO	TITLE	AUTHORS AND YEARS	TECHNIQUES	PROBLEM DESCRIPTIO
1	Deep convolutional features for image retrieval	Gkelios, S., Sophokleous, A., Plakias, S., Boutalis, Y., & Chatzichristofis, S. (2021)	machine learning, social network mining and recommendation systems addressing open problems in fashion domain	This study describes a method for shaping image retrieval features using the most recentpre-trained CNN architectures, which were initially suggested for image classification.
2	Personalized fashion recommender system with image based neural networks	Sridevi, M., ManikyaArun, N., Sheshikala, M., & Sudarshan, E (2020)	It processes the DeepFashion dataset's photos using neural networks, and then creates final suggestions using a closest neighbor-backed recommender.	It processes the DeepFashion dataset's photos using neural networks, and then creates final suggestions using a closest neighbor-backed recommender.

3	Modeling Instant User Intent and Content-Level Transition for Sequential Fashion Recommendation	Yujuan Ding, Yunshan Ma, Wai Keung Wong, Tat-Seng Chua (2021)	Attentional Content-level Translation-based Recommender (ACTR) framework	It aims to capture additional short-term fashion interest of users by modeling the item-to-item transitions.
4	A Literature Survey of Recent Advances in Chatbots	Guendalina Caldarini, Sardar Jaf, Kenneth McGarry (2022)	Natural Language Processing and Machine Learning.	Intelligent conversational computer programmes known as chatbots are created to mimic human speech in order to provide automated online assistance and support.
5	Fashion Recommender Systems	Nima Dokoohaki (2020)	machine learning, social network mining and recommendation systems addressing open problems in fashion domain	In this context, recommender systems, such as social fashion based recommendations (outfits influenced by influencers), product recommendations, or Size and fit suggestions are frequently utilised to handle a variety of complicated challenges.

6	A Survey on Accuracy-oriented Neural Recommendation: From Collaborative Filtering to Information-rich Recommendation	Le Wu, Xiangnan He, Xiang Wang, Kun Zhang, Meng Wang (2021)	They propose a novel deep neural network, called Detect, Pick, and Retrieval Network (DPRNet)	To improve the effectiveness of the video-to-shop work, they updated the conventional object detector, which automatically selects the best object offers for each commodity in films without duplication.
7	Deep convolutional features for image retrieval	Gkelios, S., Sophokleous, A., Plakias, S., Boutalis, Y., & Chatzichristofis, S. (2021)	Collaborative filtering and information-rich recommendation	We undertake a thorough analysis of neural recommender models from the viewpoint of recommendation modelling with the accuracy objective, hoping to provide researchers and professionals working on recommender systems with a summary of this area.
8	Learning fashion compatibility across categories with deep multimodal neural networks	Guang-Lu Sun, Jun-Yan He, Xiao Wu, Bo Zhao, Qiang Peng (2021)	multilayered Long Short-Term Memory (LSTM) is employed for discriminative semantic representation learning, while a deep Convolutional Neural	Here, we offer a unique multimodal framework for fashion compatibility learning that concurrently incorporates semantic and visual embeddings into a

				single
			for visual embeddings.	
9	Understanding User Satisfaction with Task-oriented Dialogue Systems	Clemencia Siro, Mohammad Aliannejadi, Maarten de Rijke (2022)	conversational recommendation System	They gather information by adding an extra annotation layer to conversations taken from the ReDial dataset, a popular conversational recommendation dataset. along with annotations at the turn and dialogue levels for the sampled dialogues. We can investigate how various conversation elements affect user satisfaction thanks to the annotations.

Problem Statements

Customer Problem Statement :

I am	I'm trying to	But	Because	Which makes me feel
customer	buy clothes	i can't spend time for stores	I am working 9-5 job	Frustrated

I am	I'm trying to	But	Because	Which makes me feel
Celebrity	Buy clothes which is trending in fashion	n the current fashion trend is not assured	my expectation is not fulfilled	Dissatisfied

I am	I'm trying to	But	Because	Which makes me feel
College student	Buy Trendy clothes with my pocket moneys	couldn't decide	I can't choose which type of clothes suits me	Disappointed

I am	I'm trying to	But	Because	Which makes me feel
girl	buy traditional	old models are not availabe	i like traditional	Anger

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	customer	buy clothes	i can't spend time for stores	I am working 9-5 job	Frustrated
PS-2	Celebrity	Buy clothes which is trending in fashion	the current fashion trend is not assured	my expectation is not fulfilled	Dissatisfied
PS-3	College student	Buy Trendy clothes with my pocket moneys	couldn't decide	I can't choose which type of clothes suits me	Disappointed
PS-4	girl	buy traditional	old models are not availabe	i like traditional	Anger

4. REQUIREMENT ANALYSIS

Functional requirement

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Registration	Registration can be done using mobile number or Gmail and needed some user Information
FR-2	Login	User only log in by user id and password, which is given during registration
FR-3	Delivery confirmation	Confirmation via email and phone number
FR-4	Assistance	Bot is integrated with the application to make the usability simple

Non-Functional requirements

Following are the non-functional requirements of the proposed solution.

NFR-4	Performance	The system shall be able to handle multiple requests at any given point in time and generate an appropriate response.

14.PROJECT DESIGN

13.3 Data Flow Diagrams:

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	A user-friendly interface with chat bot to make usability efficient
NFR-2	**Security**	Secured connection HTTPS should be established for transmitting requests and responses.
NFR-3	**Reliability**	The system should handle excepted as well as unexpected errors and exceptions to avoid termination of the program
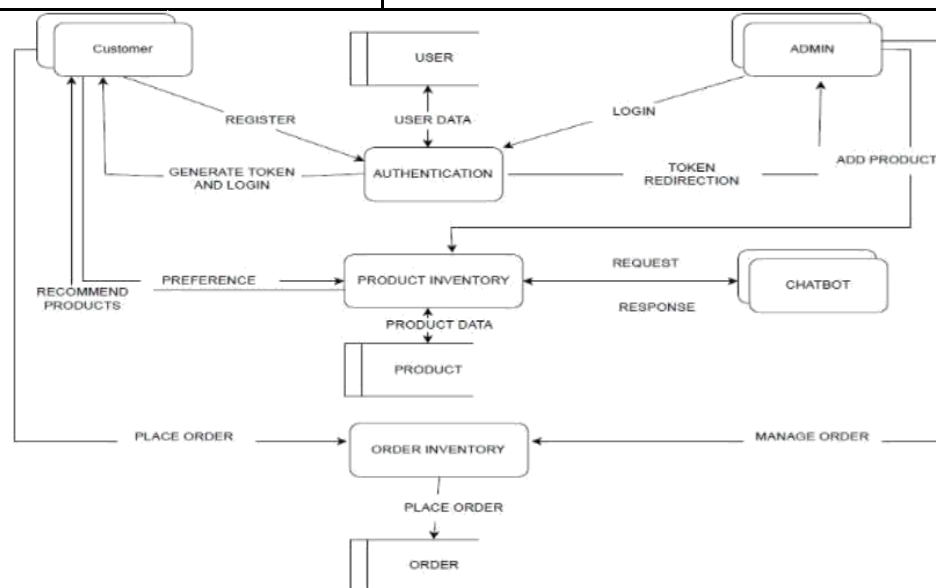

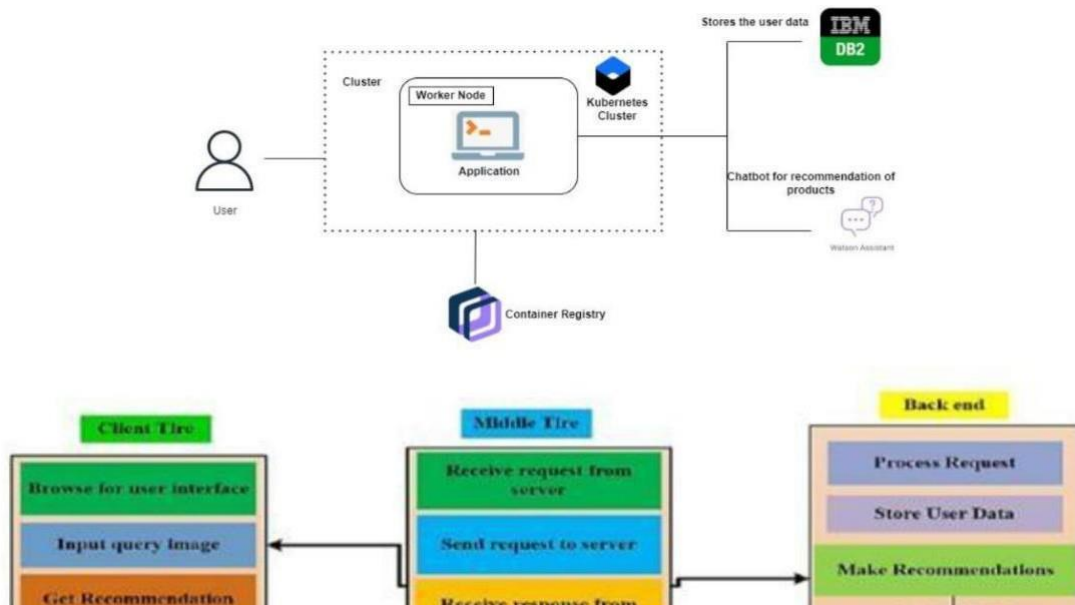

13.4 Solution & Technical Architecture:
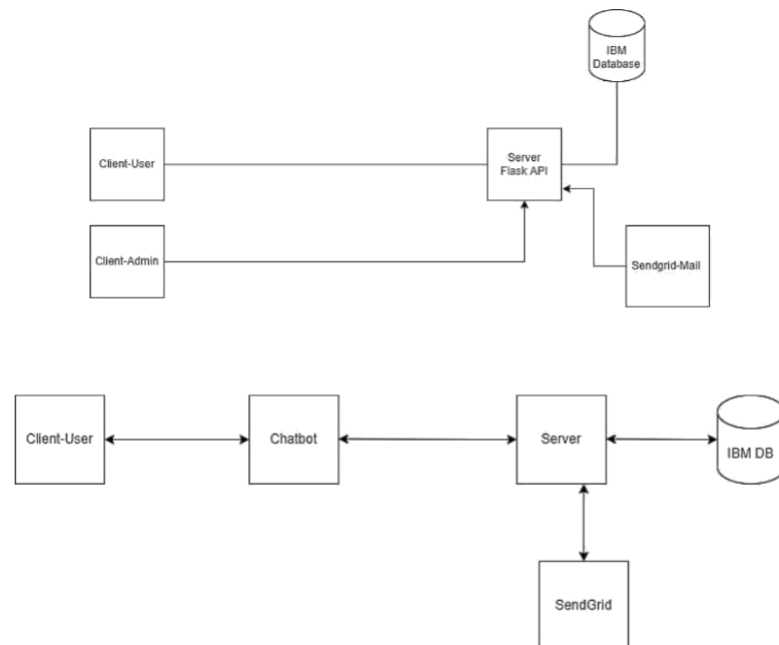

Figure 1: Architecture and data flow of the smart fashion recommendation system
